

Pokemon Go

Pokemon go is a very take risking app! Pokemon has been around since the summer 2016. It was a big hit since the beginning when it had just came out. It may be a fun game but there's high risks to it. Pokemon go is very dangerous, it breaks safety rules and it can cause injuries. I strongly believe that teenagers should no play pokemon go! Some documents containing information about this would be “ Document A: ‘Pokemon Go’ Craze Raises safety issues,” “ Document B: Pokemon Go’: The one serious problem everyone should worry about” by Bernard Marr July 19,2016, “ Document D: Is Pokemon Go Good for our Society?” Adapted From Procon.org and “ Document E: The Psychological Pros and Cons of Pokemon Go.” Adapted from Psychology Today on July 12.2016.

To begin with, Pokemon Go is a very dangerous app. According to Document A states “ The placements of PokeStops and gyms raise questions about whether players could get hurt searching unfair areas- a dark valley or along a river, for example- particularly while staring at a smartphone screen.” I can relate to this danger because when I played it we would go to dark places to find these Pokemons. According to Document A it also states “The game “could be leading people into areas where they don't belong.” such as construction sites or shuttered storefronts, said Don Boyes, associate professor of geography and planning at the University of Toronto.”. People as a matter of fact have been in some serious danger playing this game. Therefore teenagers should not play this app.

Secondly, Pokemon Go breaks safety rules. According to Document B it states, "Pokemon Go uses your phone's location, your IP address, and the web page you most recently visited before playing, all connected with your real names and account informations, according to the games privacy policy.". This shows that while we play the game our personal our personal information could fall into the wrong hands. According to Document B it also states "It uses a Google and your real-world GPS location to direct you to Pokemons you can catch, and that information can be misused.". This is very true Pokemon Go has your exact location as long as you play and people could take advantage of that. Due to this teenagers shouldn't put themselves at risk just to play a game and catch "monsters".

Third of all, Pokemon go can cause self injuries both physically and mentally. According to document D it states "However, some say that this is very reason can lead to injury. News reports say that users have tripped, fallen into a lake, crashed a car, and sustained other injuries while playing". I during the time that app was a big hit head that some people had been seriously injured while playing. According to Document E it states "Some psychological that are even when players are outside, they get distracted by being on their phones, and players are continuously in a heightened "stress" state, making players less social and willing to talk with others, which can increase the difficulty of separating reality and fantasy.". I can relate because when my sister first started playing the game she got addicted and go furious when she couldn't find any pokemons. Since the game is overwhelming and "stresses" teens outs, they should not play it.

In conclusion Pokemon Go was a very big hit that everyone wanted to play, but before you play again this game take time to see if it's worth taking the chance or risk. Pokemons Go is not only very dangerous but it hurts and put our safety at risk and it can cause us the player injuries both mentally and physically. Due to these facts teenagers shouldn't put themselves at so much risk just for a simple game.
